The minimum length Lmin of the stem is the smallest possible stem length depending on the active length La (sensitive portion) and the stem model.

The active length La of the stem has to immerse completely into the medium, to grant a measuring result which corresponds to the accuracy class.

¹⁾ The temperature difference $\Delta T = 150^\circ\text{F}$ corresponds to e.g. the temperature range 0/150 °F but also -30/120 °F
